

Supplementary Data S3: List of taxonomic changes made to the original GBIF names. Spelling changes and synonymizations were made to match the Mammal Diversity Database v2.2. Taxonomic changes that resulted in range shifts were resolved only when the name could be unambiguously assigned to one other species, otherwise, they were left as is and discussed in Supplementary Data SD16. For example, *Glossophaga soricina* once included *G. mutica* along with several other species but is now restricted to South America and *G. mutica* is the only species found in North America. Specimens only identified to the genus level by GBIF but containing a species ID in the 'verbatimScientificName' field are also included here.
